Not everybody understands the humor of programmers.

Because it's literally applied set theory which is math which indexes starting at 1?

Mathematicians index starting at 0 from time to time. One of the most popular books as an introduction to algebra is called "Algebra: Chapter 0."

My graphical calculator does that and doesn't mention it anywhere obvious in the manual.

Took me 30 minutes to work out why that program wasn't working!

The worst part is that `Len(seq) % Len(seq) = 0`, so you have to explicitly add 1 use a conditional if you're doing modular arithmetic on strings.

I mean, isn't it obvious that `x % x` will always be 0? Everything else would not make sense...

== Why would you ever need to do a redundant operation

Why

永久連結 embed 儲存 上層留言 贈送金幣

✱✱ [-]  1 指標 8 月前

== One case is if your sequence represents any sort of wraparound data with random access. To get value N you'd normally do `seq[N % Len(seq)]`, but if `Len(seq) | N` that wraps to zero and you get `seq[0]`, which is an error (since everything is 1-indexed). You could instead do

`seq[(N % Len(seq)) + 1]`, which works... unless `N < Len(seq)`.

The actual thing you need to do is

`seq[IF N % Len(seq) = 0 THEN Le`, which is ugly as sin. Usually I define a new `%%` operator as a special sequence modulus.

humor (e.g. being a power user, jokes about software not related to programming, etc.) is not allowed. Note that programming here is interpreted in a narrow sense, an analogy to something related to programming, feelings/reactions to programming etc. is not considered sufficient. (*) (*) (*) (*)

1. The image along with the title and superimposed text must result in creative and original content related to programming. Again, programming is interpreted in a narrow sense.
2. The post must be a program or UI designed intentionally for humor. Bad UI found in the wild belongs in </r/softwaregore>.

1. No hotlinking or rehosting allowed without explicit permission, unless it is obvious that the host allows it (eg. imgur) or you are the original creator of the image. Rehosting for the purposes of offering a direct link to an image is allowed in the comments. In all other cases, use a link to the webpage of the content. (*) (*)

2. Reposts:

0. You may not repost anything that has been on the first two pages (first 50) of trending posts within the last week, or has been posted last time less than two days ago (this is considered as duplicates)

1. Anything on the first two pages (first 50 posts) of the top of all time must not be reposted more often than every 6 months. (*)

What is 'obvious' or 'substantial' is left to the discretion of Friend Computer, but suggestions (reports) are welcome.

With regards to commenting, please follow [reddiquette](#).

Metadiscussions

If you have any thoughts on how the moderation could be improved do not hesitate to message the moderators. If you feel that a metadiscussion is required with the whole subreddit either request that the moderators start one or start one yourself and tag it [Meta].

Other subreddits

- </r/programmerreactions> - expressing the life of programmers through reaction images.
- </r/softwaregore> - a collection of things that users shouldn't see.
- </r/sysadminhumor> - A sub for sysadmins with a sense of humor.
- </r/itsaunixsystem> - for all the embarrassing cases of hollywood hacking you find in media.
- </r/recruitinghell> - for all those horrific recruiting offers and job postings
- </r/techhumor> - for any tech related funsies
- </r/ProgrammerEmotions> - for expressing any kind of frustration, joy, anger, subjective opinions, etc. related to programming
- </r/justgamedevthings> - for memes, reaction gifs, production glitches and other fun related to game development.
- /r/programme_irl - me too, thanks
